[A Group Of Psychologists Working At HP's Social Computing Research Group Has Found That Humans Are More Likely To Change Their Minds When Fewer, Rather Than More, People Disagree With Them](#)

THINGS
WILL
IMPROVE

Theme 3 **The information environment will improve because technology will help label, filter or ban misinformation and thus upgrade the public's ability to judge the quality and veracity of content**

- Likely tech-based solutions include adjustments to algorithmic filters, browsers, apps and plug-ins and the implementation of "trust ratings"
- Regulatory remedies could include software liability law, required identities and the unbundling of social networks like Facebook

Theme 4 **The information environment will improve, because society will adjust**

- Misinformation has always been with us and people have found ways to lessen its impact. The problems will become more manageable as people become more adept at sorting through material
- Crowdsourcing will work to highlight verified facts and block those who propagate lies and propaganda. Some also have hopes for distributed ledgers (blockchain)

MAJOR
PROGRAMS
ARE
NECESSARY

Theme 5 **Tech can't win the battle. The public must fund and support the production of objective, accurate information. It must also elevate information literacy to be a primary goal of education**

- Funding and support must be directed to the restoration of a well-fortified, ethical and trusted public press
- Elevate information literacy: It must become a primary goal at all levels of education
